import org.springframework.boot.SpringApplication;

/**
 * Case Study 4: Employee Salary Calculator
 *
 * Problem Statement:
 * An organization wants to calculate an employee's monthly salary based on
 * basic salary, allowances, and deductions.
 *
 * Concepts: Dependency injection, Service, REST API, business logic
 *
 * Requirements:
 * 1. Accept employee name and basic salary.
 * 2. Calculate allowances as 20% of basic salary.
 * 3. Calculate deductions as 10% of basic salary.
 * 4. Return the net salary.
 *
 * Formula:
 * - Allowances = basicSalary * 0.20 (20%)
 * - Deductions = basicSalary * 0.10 (10%)
 * - Net Salary = basicSalary + Allowances - Deductions
 */
